

# MFA FATIGUE

(Multi-Factor authentication)

## Convenience Ends, Risk Begins.

A tactic where attackers overwhelm users with repeated login approval requests, causing them eventually approve a malicious login attempt..

Attackers get your password(from leaks, phishing, reuse).They continuously trigger login requests, relying on user frustration or confusion resulting in gaining unauthorized access to systems, leading to data breaches & financial loss.

## How to Mitigate MFA Fatigue Attacks?

Monitor for login attempt alerts.

If you did not make a login attempt, do not approve any request

If you get a flood of MFA prompts, the attacker already has your password, change your password immediately

Be aware and updated about latest Cyber threats

If suspicious, report the incident immediately to 1930 or [www.cybercrime.gov.in](http://www.cybercrime.gov.in)
