REMOTE CONTROL AND SURVEILLANCE (REMCOS)

ONE CLICK. FULL CONTROL.

Remcos is a **Remote Access Trojan (RAT)** used by cybercriminals to secretly take control of infected computers.

It can steal your data, monitor your activity & open the door to more attacks, including ransomware.

HOW DOES IT SPREAD?

- Phishing emails & fake business communications
- Malicious attachments disguised as invoices, reports
- Fake software updates and downloads
- Links to compromised or fraudulent websites

WHAT CAN IT DO?

- Capture usernames and passwords
- Gain persistent remote access to the system
- Install additional malware, including ransomware
- Record keystrokes and screenshots

WARNING SIGNS

- Unexpected system slowdowns & Security tools disabled
- Unusual pop-ups or background activity
- Unknown programs launching automatically
- Suspicious login alerts or account activity

HOW TO STAY SAFE

1. Use strong passwords & multi-factor authentication (MFA)
2. Be cautious of urgent requests or messages creating pressure to act quickly
3. Never enable macros or download files from untrusted sources
4. Verify unexpected emails, attachments, and links before opening them
